

ABSTRACT OF THE DISCLOSURE

A billiards chalk assembly includes a case with an open top through which a chalk piece is received and located in opposite to the open top of the case. A cover has a hole defined through a top thereof so that a billiards tip is inserted in the hole and contact the chalk piece. The case is movably received in the cover from an open bottom of the cover so that the rubbing plate can be accessible via the open bottom of the cover.
